

Comments from your Chief Investment Officer

The three big macroeconomic challenges remain in place – inflation, war in Ukraine and China’s lockdown. These continued undermining market confidence in the first half of the month but, more recently, there are signs that some of these headwinds may be abating.

Russia appears to be consolidating its hold over southern Ukraine and the EU is moving to a ‘pragmatic’ position on the purchase of Russian energy exports. Although far from an optimal position, this may evolve into a manageable stasis for both sides. An easing of the Chinese lockdown has been accompanied by stimulus measures designed to boost both consumption and investment. Inflation, which we believe to be the biggest macroeconomic challenge, remains elevated and may have already undermined final demand sufficiently to cause a recession in Europe and the US. This in turn has allowed bond markets to pause and even partially reverse the anticipated pace of central bank rate hikes - over the course of the month 2-year US Treasury yields have fallen back to just over 2.5% - suggesting a moderation in the expected extent of Fed tightening.

We believe the current slowdown with its associated tightening of credit conditions will prove to have done much of the Fed’s work for it, resulting in a flatter policy cycle than currently anticipated.

During the month we have made further adjustments to your portfolio by increasing your investments in the energy and mining sectors, which are benefitting from inflationary pressures, while reducing your exposure to retailers, which are suffering margin and volume compression for the same reason. Lastly, one of your largest technology holdings announced last week that “We are gearing up for the largest wave of new products in our history with new GPU, CPU, DPU and robotics processors ramping in the second half. Our new chips and systems will greatly advance AI, graphics, Omniverse, self-driving cars and robotics”, which indicates that although having played out over several years already, the scope for further innovation remains steadily ahead of us, which we believe in turn will fuel growth.
